As a Linux Administrator, you will ensure proper functioning of various Linux servers and tools. Additionally, you will develop automation scripts while maintaining a DevOps approach by using a range of network and telecommunications tools to ensure the robustness of our infrastructure.

## What You'll Do

- Be in charge of the Linux systems, including tasks such as installations, maintenance, upgrades, system performance and application patching.
  - Automate recurrent tasks through scripting using DevOps best practices and CI/CD pipelines.
  - Monitor system events to ensure availability and good service quality.
  - Maintain documentation regarding configurations, operations and troubleshooting procedures.
  - Participate in post-mortem and root cause analysis.
  - Participate in evaluation of new requirements, technical designs, standard guidelines, best practices, and metrics.
  - Support production teams that will leverage Cloud solutions.
- 
- Deep knowledge of GNU/Linux system administration.
  - Experience with the public cloud solution such as AWS and GCP.
  - Experience with Infrastructure as Code IaC.
  - Experience with automation tools such as GitLab and Terraform and with scripting languages as well as Python.
  - Experience with monitoring tools such as Kibana, Grafana, Zabbix, or Prometheus.
  - Fluent in written and spoken English.

## What We Bring

We offer a opportunity to work with a infrastructure that supports millions of players and the chance to implement modern techniques like infrastructure as a code and DevOps.
